

Pre/Post questions - 4/27/2026 MCH R User Group Presentation

1. What is an R package?

- A. A type of dataset
- B. A collection of functions and tools
- C. A built-in plot type
- D. A coding error message

Correct answer: B

2. How do you install a package in R?

- A. `install.package("ggplot2")`
- B. `install.packages("ggplot2")`
- C. `load.package("ggplot2")`
- D. `get.packages("ggplot2")`

Correct answer: B

3. Which function is commonly used to view the first few rows of a dataset?

- A. `head()`
- B. `view()`
- C. `start()`
- D. `first()`

Correct answer: A

4. Why are R Projects useful when working on data analysis?

- A. They allow collaboration and consistent file paths
- B. They eliminate the need for packages
- C. They store results in the cloud automatically
- D. They prevent errors in code syntax

Correct answer: A

5. What is the main difference between an R script, a Quarto document, and an R Markdown file?

- A. They are all the same and used interchangeably
- B. Scripts only run code; Quarto and R Markdown can combine code, text, and output
- C. Quarto is only for data storage
- D. Markdown is used only for installing packages

Correct answer: B
